

AS EASY AS **ONE-TWO-THREE**

The HIAB T-series light range makes
easy work of your heavy lifting

MAKE IT EASY WITH THE H

When you do a job, you want it done your way, not the hard way. With a crane from the HIAB T-series light range, you can make easy work of your heavy lifting. And choosing the right one is as easy as one-two-three.

1 Choose your control

Based on your demands and safety requirements, you make an easy choice between three different control systems: CLX, Duo or HiDuo.

1 CLX – for straightforward use

A CLX crane is a practical, easy-to-use crane for day-to-day needs. CLX is often the choice for smaller pickup trucks with smaller platforms, such as those used in community services or provided by firms that hire out construction tools. The crane is steered manually by default, but an add-on option can be used to create a basic crane with remote control.

2 Duo – for additional safety

A Duo crane is manually operated and easy to use, but it automatically adds a higher level of safety. The crane's SPACE system provides automatic assistance, making it easier to operate the crane safely without special training. Plus it tracks the crane's usage, providing valuable statistics and indicating when service and repairs are needed. For both reasons, Duo is ideal for larger fleets with many drivers at various skill levels.

3 HiDuo – for complete safety and control

A HiDuo crane is the perfect choice for more demanding jobs – and for demanding operators who want total control. Besides safety-enhancing assistance from the SPACE system, a HiDuo crane has SmartControl, which provides additional safety features and enables simultaneous crane movements. Yet another HiDuo feature is remote control with XS Drive Lite, a high-precision system for manoeuvring and positioning goods from the perfect vantage point.

HIAB T-SERIES LIGHT RANGE

2 Choose your capacity

Your next decision is what you want to lift and how. Six capacity classes in the HIAB T-series cover the full range of needs. Just consider whether today's needs are enough – or whether you want a little extra capacity for tomorrow.

3 Choose your options

With control and capacity in hand, your third decision is how to make your crane your own. Optional features like HybridDrive, which lets you use the crane with the truck engine off for a limited time, make it possible to get things done your way – the easy way.

LIGHT CRANES WITH STRONG ADVANTAGES

The features shown here are some of many reasons why HIAB T-series light cranes provide unbeatable quality and long-lasting peace of mind.

nDurance

Constantly exposed to the elements, your crane needs the best in surface protection. HIAB nDurance is the industry's most effective high-tech painting system, with a technologically advanced and environmentally sound process based on nanotechnology and e-coating.

Your crane's parts are first shielded by an ultra-thin nanoceramic layer that prevents corrosion. Afterwards they receive a lacquer polymer e-coating and a durable powder coating, which create stunning good looks that will last your crane's lifetime.

HybridDrive

HybridDrive from HIAB combines operating flexibility with economy that benefits the environment. The T-series crane can perform a number of lifts while the engine is off, which allows a certain amount of loading or offloading with no fuel consumption, no emissions and minimal noise.

CastBase

CastBase from HIAB is your assurance of a durable, well-sealed crane mounting. When the base of your crane is cast instead of shielded by a plastic cover, it forms a tight barrier that keeps air and moisture out. That means the quality of your lubricant is maintained for longer, which in turn means trouble-free ownership and a crane that is always ready to go.

SmartControl

Your T-series crane is available with three different control systems. If you choose the HiDuo* system, you also get SmartControl. Besides adding stability logic, a high-boom warning and other safety features, SmartControl allows several crane movements to be performed simultaneously. For example, your crane can be turned while deploying the extensions at the same time, which brings your load more quickly to the place where you need it.

**May also apply to CLX cranes, depending on local regulations*
